Introductory Message

For the facilitator:

Welcome to Technical Vocational Livelihood Education ICT Grade 12 CSS NC II Module on **Set Up User Access: Installing VMware Workstation 12 for Server-Client Virtualization.**

This module was collaboratively designed, developed and reviewed by educators from Schools Division Office of Pasig City headed by its Officer-In-Charge Schools Division Superintendent, Ma. Evalou Concepcion A. Agustin in partnership with the Local Government of Pasig through its Mayor, Honorable Victor Ma. Regis N. Sotto. The writers utilized the standards set by the K to 12 Curriculum using the Most Essential Learning Competencies (MELC) while overcoming their personal, social, and economic constraints in schooling.

This learning material hopes to engage the learners into guided and independent learning activities at their own pace and time. Further, this also aims to help learners acquire the needed 21st century skills especially the 5 Cs namely: Communication, Collaboration, Creativity, Critical Thinking and Character while taking into consideration their needs and circumstances.

In addition to the material in the main text, you will also see this box in the body of the module:

Notes to the Teacher

This contains helpful tips or strategies that will help you in guiding the learners.

As a facilitator you are expected to orient the learners on how to use this module. You also need to keep track of the learners' progress while allowing them to manage their own learning. Moreover, you are expected to encourage and assist the learners as they do the tasks included in the module.

EXPECTATION

After completing the lesson the learners should be able to:

- A. define Virtualization Software;
- B. demonstrate the process of installing VMware Workstation 12; and
- C. give importance of Virtualization in these trying times

PRE-TEST

Chronology

Directions: Arrange the steps in installing VMware Workstation 12 for virtualization in alphabetical order from A to F.

- _____ 1. Double click the executable file for VMware workstation 12. Allow the program to install in your device and click next.
- _____ 2. Find the VMware Workstation 12 Pro from the list of program and execute.

- _____ 4. Select Create a New Virtual Machine from the Home Tab. Select Typical (Recommended) as type of configuration and click NEXT.
- _____ 5. Let the installation continue. Enter the license key from the crack folder and click FINISH.
- _____ 6. Specify disk capacity from 40 Gb to 100 Gb. Select Store virtual disk as a single file. Click NEXT and click FINISH.

RECAP

Directions: Read each statement below carefully. Write **T** if the statement is correct and **F** if not in the space provided before each number.

- _____ 1 Client/server network operating systems allow the network to centralize functions and applications in one or more dedicated file servers.
- _____ 2. Client/Server is centralized because resources and data security are controlled through the server.
- _____ 3. One of the disadvantages of a peer to peer network is security.

_____ 4. Peer-to-peer network operating systems allow users to share resources and files located on their computers and to access shared resources found on other computers.

_____ 5. Windows Server 2008 R2 can be used as NOS.

LESSON

Installing VMware Workstation 12 for Server-Client Virtualization

Introduction

VMware Workstation Pro allows you to run multiple operating systems at once on the same Windows or Linux PC. Create real Linux and Windows VMs and other desktop, server, and tablet environments, complete with configurable virtual networking and network condition simulation, for use in code development, solution architecting, application testing, product demonstrations and more.

Illustration below shows a logo of **VMware Workstation 12 Pro** to be used as Virtual Machine for the series of hands on activities:

What is VIRTUALIZATION SOFTWARE?

Virtualization software allows you to run two or more operating systems using only one PC. So it's like two (or more) computers in one. One is physical, and the others are virtual. More broadly, virtualization can refer to any instance of one IT resource hosting multiple other IT resources, including applications, servers, clients, storage capacities, or networks.

Virtualization software, also called a hypervisor, is what allows one computer or server to host multiple operating systems.

Virtual networking enables communication between multiple computers, virtual machines (VMs), virtual servers, or other devices across different office and data center locations. While physical networking connects computers through cabling and other hardware, virtual networking extends these capabilities by using software management to connect computers and servers over the Internet. It uses virtualized versions of

traditional network tools, like switches and network adapters, allowing for more efficient routing and easier network configuration changes.

How to install VMware Workstation 12 Pro?

With these trying times, we do not allow to have face-to-face classroom set up so we will not be able to have an actual PC or in virtualization process, called physical machine. Virtual machine is our own little way to practice and have a bit of knowledge and skills to virtualize server-client set up.

The following steps are illustrated so as to follow completely the process:

With the given software, double click the executable file located inside the installation folder. In this case, VMware installation folder is securely save at the important file storage (depending on the location where it is saved).

9. Restart your computer/laptop and do the installation all over again. Do figures 1 to 12. Then try uninstalling procedures.
10. Answer the Self-Assessment Guide to assess yourself how far have you gone through with our activity.

WRAP – UP

Directions: Complete the missing statement.

Virtualization on VMWare Workstation allows you to run multiple operating systems at once on the same Windows or Linux PC. Virtualization software gives you to have one or more PC in one, that is physical and the others are virtual. Virtualization software, also called hypervisor is what allows one computer or server to host multiple operating systems.

VALUING

As ICT/CSS student, what can you say about the use of VMware in these trying times?
